

GLULAM BEAM BRIDGES & WALKWAYS

Our beams, bridges and walkways are engineered and designed right here at Maine Timber Works to accommodate your specifications up to 30 feet long to handle anything from structural building to foot to light vehicle traffic.

The University of Maine's *Advanced Engineered Wood and Composite Center AEWC* assisted in the development of our lamination techniques for engineered beam products that are functional, strong and extremely durable while reducing waste.

This green production process allows us to use low-VOC adhesives and finishes.

Beauty with functionality

Low maintenance

Environmentally friendly

Maine Timber Works can manufacture custom application glulam and laminated wood in any specified size and shape. Able to manufacture for any project: decorative arches, landscape bridges and walkways, shelters, building entrances, and full structural applications.

We can meet your design needs!
